english

Benefit from the new interactive printing portal

The dots iSWT 4 software solution comprises a complete interactive printing portal that keeps online ordering smart and simple: with user identification, secure data transfer and uploads, the possibility of archiving jobs for speedy reprinting, even instant online price quotes.

Customizable GUI

dots iSWT 4 takes a smart approach to user management. The administrator simply defines a set of user groups, then adapts a perfect GUI for each group: colour themes, products, prices, even the language can be custom-defined. To streamline administration workflows, dots iSWT 4 also provides different levels of administration rights.

Icon-based product catalogue

The new dots iSWT 4 icon-based product catalogue makes placing orders for print products simpler – and more reliable – as it instantly shows what the finished product will look like. Choose green paper, and the icon turns green; change from 2-hole to 4-hole punching, and see the effect instantly.

Instant online quoting

How much does it cost? Instead of sending calls and e-mails asking this question, let dots iSWT 4 do the work! dots iSWT 4 instantly displays the price for each order placed via the system, even calculating with a lower price per page if a limit has been set. Direct delivery of cost information into order workflows adds value for print clients. But – perhaps even more important – the information is also available to downstream applications, making cost control easy and effective.

Stand-alone web front end

dots iSWT 4 is a stand-alone web front end. But combine it with Cockpit JTX 4 – and you're ready to experience a power in printing seldom offered. Because along with the PDF print data, iSWT 4 delivers a range of information such as sender, product and price in the dots Job&Order Ticket. dots Cockpit 4, the powerful Job Ticket application for the central print room, can process this information further. With the power of this integrated software suite, you can design custom workflows and even fully automate your printing.

Web 2.0 based

The Web 2.0 technologies Ajax, XHTML and Java Script bring new flexibility to interaction with users, and enable near-instant responsiveness. With astonishing mouse-over effects and other Web 2.0 usability features, dots iSWT 4 is a printing portal with an entirely new look and feel.

“We don't see our office as a stand-alone section of public administration. It's part of a much bigger picture. We're a service provider and, with dots iSWT, we can also communicate our knowledge outside.”

Wilfried Schmidt, Internal Services manager, presidium,
Hanover Revenue Office

dots products

The new interactive printing portal

**dots iSWT 4 is the new stand-alone web front-end from dots.
It is the perfect software solution for centralized printing environments.**

End-to-end security and reliability

dots iSWT 4 is a interactive printing portal for submitting print jobs reliably and securely straight into print workflows. Being web technology-based, it integrates absolutely seamlessly into existing IT environments. Jobs processed in dots iSWT 4 are delivered as printable PDFs and therefore the jobs can be further processed in any other printing solution. To experience the full power of dots Software, we recommend the combination with dots Cockpit 4 JTX, the perfect solution for the central print room.

Customizable to any scenario

dots iSWT 4 offers a wide range of easily customizable parameters – such as different looks, languages, products and prices. Even the order process itself can be defined individually: Choose between a “Quick print” or “Shopping cart” workflow. This way dots iSWT 4 can be matched to any centralized printing task.

dots iSWT 4 at a glance

- Interactive printing portal
- Easily customizable GUI
