

How-to: AccurioPro Flux

Fast imposition without prior product configuration

It's urgent: You receive a print job and want to impose and print it immediately. With Flux Workstation this can be done very quickly.

Fast impositioning without prior product configuration

A customer delivers a 16-page document to be printed as a brochure in 205 x 205 mm format. You have not yet set up a signature and the desired paper format for this request in Flux Workstation. The order is urgent and you want to print it immediately without any product setup. No problem.

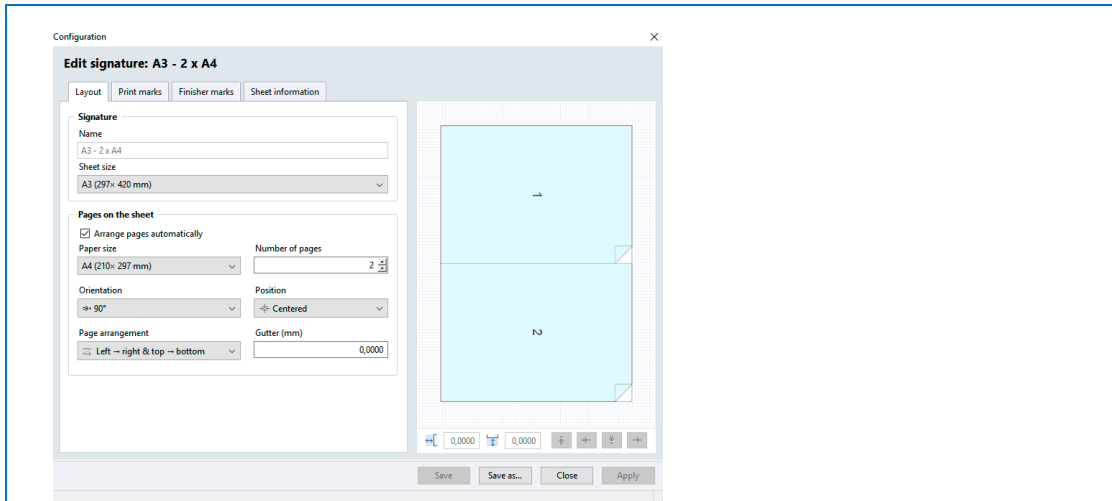

Importing the job

- 1 Select **File | New print job** or click **New print job** in the toolbar.
- 2 Specify the desired file in the following dialog window.
- 3 Select **No product** in the product selection.
- 4 Enter the desired number of **Copies**.
- 5 Follow the instructions in the import dialog and complete the import by clicking **Edit document**. The job is opened in the job editor.

Imposing the document

- 1 In the right panel, select **Imposition** as **Output format** and then select **Booklet I** as **Imposition scheme**.
- 2 Click the pencil icon next to the preset signature.
The signature editor opens.

3 Make the following settings for the example above:

- Sheet size** Size of the print sheet A3 (297 x 420 mm)
Paper size Final format of the closed brochure 205 x 205 mm
Number of pages 2
Arrange pages automatically Activate
Orientation 90°

If you want to create a new paper format, open the **Paper size** selection list. Scroll to the end of the list and select **Add new paper format**. Enter the dimensions of the new paper format in the following dialog box; in the example it is 205 x 205 mm.

Clicking **Add** applies the paper format to the current signature and adds it to the list of available paper formats in the configuration.

4 You can specify additional signature settings in the individual tabs, e.g. cut marks in the tab **Print marks**.

5 When you have made all settings, you can apply the signature to the current document by clicking **Apply**.

- Clicking **Close** closes the signature editor. All settings are discarded.

6 You can also save the signature in the signature list.

- Click **Save** to apply the changes to the current document and also save them in the selected signature. Attention: The current signature will be overwritten.
- Click **Save as** to open a dialog box in which you can specify a new name for the signature. The changes are applied to the current document. In addition, the signature is saved under the new name in the signature editor.

7 Finally, in the job editor, check the other print settings, such as paper type, color print, page fitting and finishing.

Printing the job

You can print the job directly from the job editor.

To do this, click **Print** or **Proof print** in the toolbar.

If the job has been newly imported, it must be saved first.

A dialog box informs you about it before printing.

When the job is saved, it is also added to the job list.

Some closing remarks ...

This feature is available in

- AccurioPro Flux Essential
- AccurioPro Flux Premium
- AccurioPro Flux Ultimate

(Version 7.8)

If you want to use this feature, you should be familiar with these functions in AccurioPro Flux:

- Importing print jobs
- Defining print settings in the job editor
- Setting up signatures
