

How-to: AccurioPro Flux

Flux Raster Editor: Delete, move and rotate scanned image content

Documents cannot always be scanned optimally. Maybe they are punched or stapled and these areas are also scanned automatically. Sometimes elements in the original file are not arranged as needed and must be rotated or moved after scanning.

Delete, move and rotate scanned image content

Your job contains a scanned table in A4 format. The table was scanned in landscape format. As in portrait format, the logo should be positioned in the top right corner of the page according to the company guidelines. By using the image editor of AccurioPro Flux you can rotate the logo and move it to the intended position. The punched holes and staples that have been scanned can also be removed.

Please note: The image editor is only available in Flux Workstation.

Open job in the image editor

- 1 Select the job in the job list.
- 2 Select the menu command **Job | Edit images...** or click on the symbol of the same name in the toolbar. The image editor opens.

The toolbar with command icons is located in the upper area.

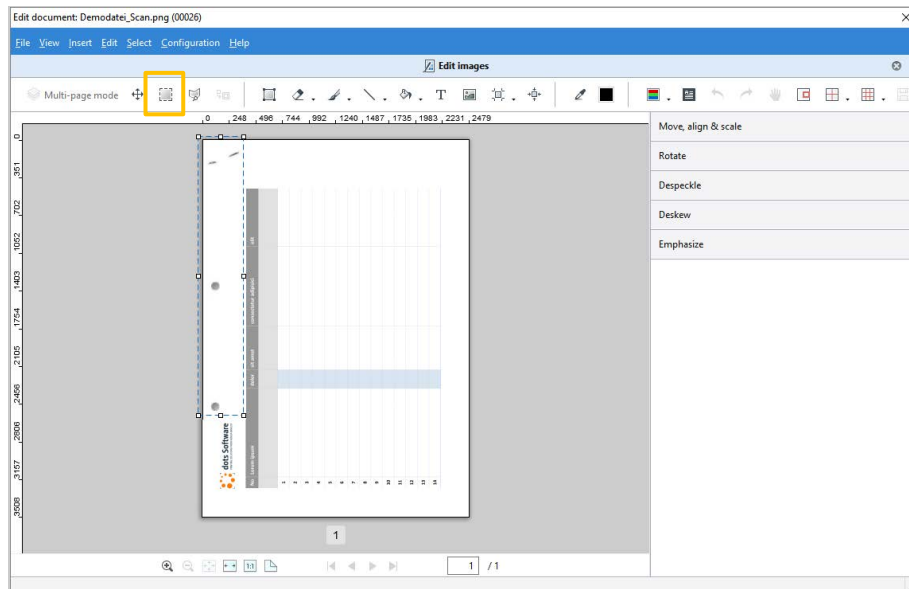

The right section of the window contains the accordion menu. The commands in the accordion menu are arranged in different sections. You can expand a section by clicking on it.

Important: The changes you make in the image editor are saved in the working file and cannot be reset. If necessary, duplicate the job in advance.

Delete elements

- 1 Activate the rectangle selection  in the toolbar.
- 2 While holding the left mouse button, select the area with the scanned holes and staples.

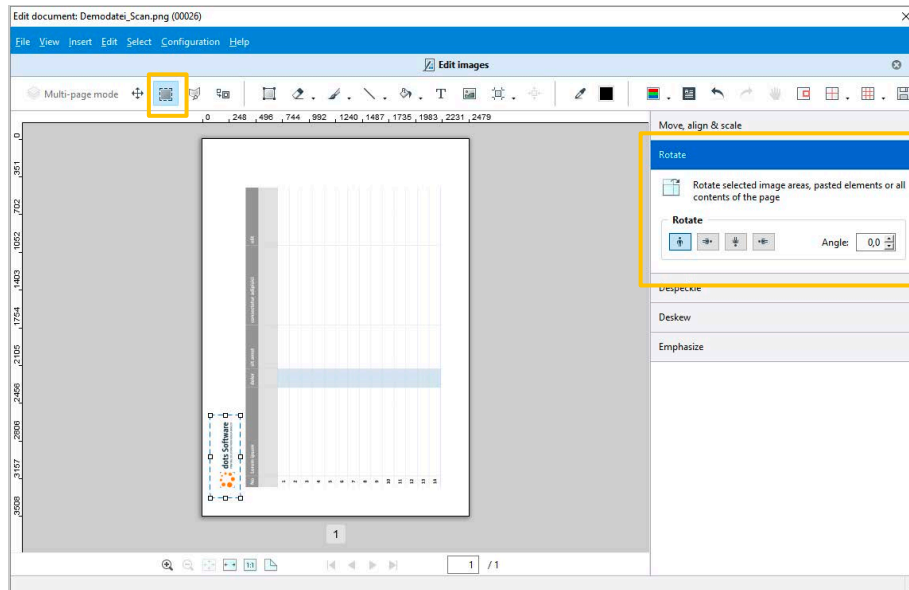

- 3 Press the [Delete] key on your keyboard. The selected area is deleted.
- 4 Confirm the deletion by clicking outside the selected area.

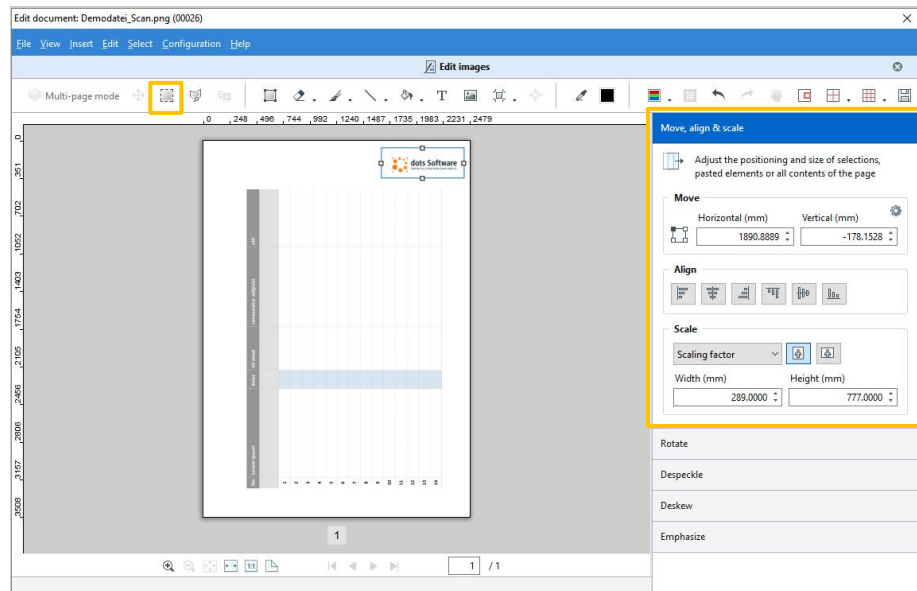

Rotate and move logo

- 1 Activate the rectangle selection  in the toolbar.
- 2 Select the logo while holding the left mouse button.
- 3 Expand the section **Rotate** in the accordion menu.

- 4 Click on the symbol for the intended rotation () .
The logo is rotated and marked with a solid line.

- 5 Hold the mouse button and drag the logo to the intended position.
Or use the options in the section **Move, align & scale**.
- 6 Confirm the rotation and the position by clicking outside the selected area or pressing the [Enter] key on your keyboard.

Save changes and close the image editor

- 1 Click on the Save icon  in the toolbar at the top right.

Some closing remarks ...

For your information:

Original files are the original files users submit with their print job. The files are in the originally sent format. These files remain unchanged when you work in the image editor.

Working files are all the files that are contained in a print job and from which the print file is generated. In AccurioPro Flux, working files are created from the original files in PDF format. Changes you make in the image editor are saved in the working files.

The image editor is part of the *Flux Raster Editor* option.

The option can be purchased for

- AccurioPro Flux Essential
- AccurioPro Flux Premium
- AccurioPro Flux Ultimate

Status: Version 8.0

If you want to reproduce the example, you should be familiar with these functions in AccurioPro Flux:

- Scanning documents
- Managing jobs
- Closing the job editor
